

Setup and Run test apps on mobile device

Note: This app will only work on Android devices.

1. You need to unlock Developer Mode for your device. You can look up online how to do it on your specific device.
 - a. For Samsung phones you can go **to Settings -> About Phone -> software information**
 - b. Look for the build number and tap it 7 times quickly. This should unlock Dev mode.
2. Go to Developer Options and make sure Dev mode is set to ON.
3. Look **for “USB Debugging”** and enable it.
 - a. Be sure to disable this later as it’s only needed to install the app
4. Plug your phone into your PC. If prompted select **“Allow USB debugging”** on your mobile device.
5. Launch Visual Studio (If it’s already opened you may need to restart).
6. Next to the play button click the drop-down to select emulators. Look for the **Android Local Device** and select your phone.
7. Running the program will install the app on your phone so you can use it.
