Part 1:

For the second part of the project I worked on mainly the the UI of our app and how to make it more user friendly as well as appealing to the auidences viewing the app. Yes , I definitely did as in the fall it was mainly decided that the UI part would be done by me and as we went ahead I mainly developed on it having different ideas on how to make the app more user friendly. From this work mainly what I learned was how much communication is important between group members and each group member has different ideas I how corporate those idea in reality as in some parts you might have to compromise some of your idea as because it might not be feasible or that you don't have much time to work on it and how to come up with a solution that is accepted by each group member.

I also worked little bit on the other coding part of the project which also helped me gain insight into a new language which I had learnt about. I also learnt about how to work on new platforms like I had experience only working on with VS studio but this time I worked on a new platform called VS community which I had never worked on and this in sense helped me with learning new things.
